EBSCO
Grail Design System
ⓐ Accessiblity

Design Checklist

Try to approach design with accessibility in mind throughout the process.

✓ Appropriate color contrast has been applied and tested for WCAG 2 AA compliance.

✓ The fonts chosen are readable and can be easily resized in the browser without breaking the site.

✓ Text line lengths have been considered in all screen sizes.

✓ Alt-text for all graphics have been provided to developers.

✓ Content appears and operates in predictable ways.

✓ System affords appropriate space between action items and click/tap areas are large enough for users with mobility challenges.

✓ The design for the system provides for the needs of people using alternate input devices.

Development Checklist

✓ There is a consistent heading structure with a logical page hierarchy.

✓ A "Skip to Main Content" link has been added. This can be coded to so it is hidden until tabbed with a keyboard.

✓ Aria Roles are used when appropriate.

✓ All page elements can be accessed with a screen reader and a keyboard.

✓ There is alt-text for all graphics.

✓ There are captions or transcripts for audio.

✓ All links maintain visible focus when navigating with a keyboard.

✓ The content of each graph and chart is summarized.

✓ Any tables include labeled rows and headers.

✓ Logical groups are named and include appropriate attributes.
